

Step 3 — Open PR & validate

Once you've verified that `run-tests-eval.sh` runs cleanly in Docker, open a Pull Request for review.

Scope check before opening the PR

Before pushing, run:

```
git diff main..HEAD --name-only
```

 Copy

Every file in that list must match one of these allowed paths:

- `.helix/Dockerfile.helix`
- `.helix/run-tests-eval.sh`
- `.helix/metadata.json`
- `.github/workflows/build-push-gar.yml`
- `.github/workflows/golden-solution-validation.yml`
- `.github/workflows/helix-validation.yml`

If anything else appears, remove it before pushing.

Scope is enforced

Source-code fixes, README touch-ups, or lint passes do NOT belong in the Docker-seeding PR. They go in a separate PR or not at all.

Create your branch

Use the branch name **`docker-golden-solution`**:

```
git checkout -b docker-golden-solution
```

 Copy

Open a PR

- **PR title:** Prefix with `[DOCKER SEEDING]`.
- **PR body:** Can be left empty.

Example PR title

[DOCKER SEEDING] Add Docker config and run scripts

What the workflow checks

When you open the PR, the GitHub Actions workflow runs automatically. It validates two things:

1. Validate `.helix` required files¹ — confirms the required files exist in ``.helix/``.
2. Build & run tests² — builds the Docker image and runs your test script inside it.

¹. Checks for `Dockerfile.helix`, `run-tests-eval.sh`, and `metadata.json`

². Runs your script in a clean container

Branch matters

The validation workflow triggers on `pull_request` to the `docker-golden-solution` branch. Please make sure you use this branch.

After checks pass

Do not submit early

Submit only after ALL PR checks have passed. If checks are cancelled or have not passed, do not submit. Wait for every check to complete with a green checkmark.

Checks still pending?

If checks show 'Some checks haven't completed yet' with pending items marked as 'Required', wait for them to finish. Do not merge or submit while checks are still running.

 **Some checks haven't completed yet**
1 skipped, 2 expected, 2 successful checks

2 pending checks ▾

- Build & run pass@ compatible tests Expected — Waiting for status to be reported **Required**
- Validate .helix required files Expected — Waiting for status to be reported **Required**

1 skipped check ▾

- 🕒  Golden Solution Validation / prevalidate (pull_request) Skipped 19 minutes ago ...

2 successful checks ▾

- ✓  Helix Validation / validate / Build & run pass@ compatible tests (pull_request) Successful in 2m ...
- ✓  Helix Validation / validate / Validate .helix required files (pull_request) Successful in 27s ...

Merge pull request ▾ You can also merge this with the command line. [View command line instructions.](#)

Still in progress? [Convert to draft](#)

Wait for all required checks to complete before merging.

Once all checks pass, merge your PR. Then submit a screenshot of your merged PR along with any feedback on the [annotation platform](#).

Debugging failures

If a check fails, open the **GitHub Actions** run and expand the failed step to see the log.

Validation check slow or hitting 'No space left on device'?

The Docker build step inside the validation workflow runs on a GitHub Actions runner with limited disk. A heavy `Dockerfile.helix` can take a long time to build or fail with 'No space left on device'. This is a common, well-known issue. See the 'Docker Build Fails — No space left on device' subsection of the Troubleshooting Guide — the fix is usually switching to a slim base image and trimming non-essential installs.

GitHub Actions run detail (why a check failed):

Expand the failed step to see the error (e.g. `pytest: command not found`, exit code 127).

Fix the script and push again until both checks pass. Once all checks pass, merge your PR.

PR status when checks fail (merging blocked):

 **Review required**
At least 1 approving review is required by reviewers with write access.

 **Some checks were not successful**
1 failing, 1 successful checks

1 failing check ▾

  **Helix Validation / Build & run pass@ compatible tests (pull_request)** Failing after 28s

1 successful check ▾

  **Helix Validation / Validate .helix required files (pull_request)** Successful in 7s

 **Merging is blocked**
At least 1 approving review is required by reviewers with write access.

☐ Merge without waiting for requirements to be met (bypass rules)

Merge pull request ▾

You can also merge this with the command line. [View command line instructions.](#)

Still in progress? [Convert to draft](#)

Validate .helix required files passed; Build & run tests failed. Use the Actions trace to debug.

PR status when all checks pass (ready to merge):

 **All checks have passed**
2 successful checks

  **Helix Validation / Build & run pass@ compatible tests (pull_request)** Successful in 1m

  **Helix Validation / Validate .helix required files (pull_request)** Successful in 6s

 **No conflicts with base branch**
Merging can be performed automatically.

Merge pull request ▾

You can also merge this with the command line. [View command line instructions.](#)

Still in progress? [Convert to draft](#)

Both Helix Validation jobs passed — merge your PR.
